

FLANGE DRILLING CNC

Automatic Flange Drilling system equiped with integrated CNC controller and mini computer for precision motion using servo motors.

Improve your production time and precision with this highly efficient industrial autmation software.

With inhouse electronics and software experties, we provides best customized solution for your work environment.

Position control of 3 Axis (X, Y, and Rotary)

- Accuracy of 0.01mm / 0.01degree

Spindle position control

- Can support Z axis with accurate position control
- Supports special solenoid based RAM control

Automatic switching of Spindle and Coolant

Operator friendly work panel

 Alarm/Fault indicator, Emergency master switch, Manual motion control

Panel mounted LCD Touch panel

- Easy to use FlangeDrill software

Automatic Flange Drilling system equiped with integrated CNC controller and mini computer for precision motion using servo motors. Improve your production time and precision with this highly effecient industrial automation solution.

With inhouse electronics and software experties, we provide best customized solution for your work environment. Operator friendly panel with touch screen software interface. Emergency switch and external input interlocking safety.

FLANGE

Put Flange on Rotary Stage. Moving down to drill hole. Move to PCD first hole position. Drilling First hole.. Moving to next hole. Drilling second hole.
